CLIMATE & FOOD

You cause the grass to grow for the cattle and plants for people to cultivate, to bring forth food from the earth...

—Psalm 104:14

Did you know...

Around Lake Chad, most farming around Lake Chad depends totally on rainfall. Shorter growing seasons and unreliable rainfall are making it harder for farmers to grow enough food, and malnutrition is a growing concern, especially among children.

Your support is helping...

CLWR's work around Lake Chad tackles food security at all levels, including soil health, crop diversity, reforestation, irrigation, and better livestock and fishery management practices. Through these efforts, the project is restoring the resilience of the land and the people, helping build sustainable, climate-resilient food systems that can support these communities for decades to come.

Please pray...

To our God of Abundance, for the farmers whose seasons are shifting and whose soil is tired. Pray for those planting in hope and defiance, and bless the hands learning to care for the earth and heal the land.
